CONTENTS OF VOLUME 25

NUMBER 1, JANUARY 1986

ROBERT S. THOMPSON, LARRY BENSON, AND EUGENE M. HATTORI. A Revised Chronology for the Last Pleistocene Lake Cycle in the Central Lahontan Basin 1

DANIEL H. MANN. Reliability of a Fjord Glacier's Fluctuations for Paleoclimatic Reconstructions 10

STEVEN M. COLMAN AND KENNETH L. PIERCE. Glacial Sequence near McCall, Idaho: Weathering Rinds, Soil Development, Morphology, and Other Relative-Age Criteria 25

RICHARD F. MADOLE. Lake Devlin and Pinedale Glacial History, Front Range, Colorado 43

AARON KAUFMAN. The Distribution of $^{230}Th/^{234}U$ Ages in Corals and the Number of Last Interglacial High-Sea Stands 55

THURE E. CERLING AND RICHARD L. HAY. An Isotopic Study of Paleosol Carbonates from Olduvai Gorge 63

T. H. E. HEATON, A. S. TALMA, AND J. C. VOGEL. Dissolved Gas Paleotemperatures and ^{18}O Variations Derived from Groundwater near Uitenhage, South Africa 79

JAMES E. KING AND JEFFREY J. SAUNDERS. *Geochelone* in Illinois and the Illinoian–Sangamonian Vegetation of the Type Region 89

DOROTHY M. PETEET. Modern Pollen Rain and Vegetational History of the Malaspina Glacier District, Alaska 100

JIM I. MEAD, LARRY D. AGENBROAD, OWEN K. DAVIS, AND PAUL S. MARTIN. Dung of *Mammuthus* in the Arid Southwest, North America 121

ANTHONY D. BARNOSKY. "Big Game" Extinction Caused by Late Pleistocene Climatic Change: Irish Elk (*Megaloceros giganteus*) in Ireland 128

LETTER TO THE EDITOR

JAMES E. BEGET. Comment on "Outburst Floods from Glacial Lake Missoula" by G. K. C. Clarke, W. H. Mathews, and R. T. Pack 136

BOOK REVIEW

ROBERT L. BETTINGER. *Man and Environment in the Great Basin*. Edited by David B. Madsen and James F. O'Connell 139

NUMBER 2, MARCH 1986

JOHN KAPPELMAN. Plio-Pleistocene Marine–Continental Correlation Using Habitat Indicators from Olduvai Gorge, Tanzania 141

ALLEN M. SOLOMON AND ALISON B. SILKWORTH. Spatial Patterns of Atmospheric Pollen Transport in a Montane Region 150

MEL A. KUNTZ, ELLIOTT C. SPIKER, MEYER RUBIN, DUANE E. CHAMPION, AND RICHARD H. LEFEBVRE. Radiocarbon Studies of Latest Pleistocene and Holocene Lava Flows of the Snake River Plain, Idaho: Data, Lessons, Interpretations 163

Z. LEWY, D. NEEV, AND M. W. PRAUSNITZ. Late Holocene Tectonic Movements at Akhziv, Mediterranean Coastline of Northern Israel 177

Q. B. HENDEY AND T. P. VOLMAN. Last Interglacial Sea Levels and Coastal Caves in the Cape Province, South Africa 189

ERIC M. LEONARD. Varve Studies at Hector Lake, Alberta, Canada, and the Relationship between Glacial Activity and Sedimentation 199

BONNIE BLACKWELL AND H. P. SCHWARCZ. U-Series Analyses of the Lower Travertine at Ehringsdorf, DDR 215

LISA J. GRAUMLICH AND LINDA B. BRUBAKER. Reconstruction of Annual Temperature (1590–1979) for Longmire, Washington, Derived from Tree Rings 223

M. G. WINKLER, A. M. SWAIN, AND J. E. KUTZBACH. Middle Holocene Dry Period in the Northern Midwestern United States: Lake Levels and Pollen Stratigraphy 235

MICHAEL R. WATERS. The Sulphur Spring Stage and Its Place in New World Prehistory 251

LETTERS TO THE EDITOR

STEPHEN T. JACKSON, DONALD R. WHITEHEAD, AND OWEN K. DAVIS. Accelerator Radiocarbon Date Indicates Mid-Holocene Age for Hickory Nut from Indiana Late-Glacial Sediments 257

P. F. KARROW, B. G. WARNER, AND P. FRITZ. Reply to J. F. P. Cotter, E. B. Evenson, L. Sirkin, and R. Stuckenrath 259

BOOK REVIEWS

FIORENZO C. UGOLINI. *Genesis and Classification of Cold Soils*. By Samuel Rieger 263

MARY EDWARDS. *Past and Present Vegetation of the Far Northwest of Canada*. Edited by J. C. Ritchie 263

LISA K. CROFT. *Quaternary Extinctions. A Prehistoric Revolution*. Edited by Paul S. Martin and Richard G. Klein 264

NEW BOOKS RECEIVED 266

NUMBER 3, MAY 1986

DEREK B. BOOTH. Mass Balance and Sliding Velocity of the Puget Lobe of the Cordilleran Ice Sheet during the Last Glaciation 269

RICHARD CROOK, JR. Relative Dating of Quaternary Deposits Based on *P*-Wave Velocities in Weathered Granitic Clasts 281

RICHARD HEREFORD. Modern Alluvial History of the Paria River Drainage Basin, Southern Utah 293

CLAUDE HILLAIRE-MARCEL, ODETTE CARRO, AND JOEL CASANOVA. ^{14}C and Th/U Dating of Pleistocene and Holocene Stromatolites from East African Paleolakes 312

PAUL A. DELCOURT, HAZEL R. DELCOURT, PATRICIA A. CRIDLEBAUGH, AND JEFFERSON CHAPMAN. Holocene Ethnobotanical and Paleoecological Record of Human Impact on Vegetation in the Little Tennessee River Valley, Tennessee 330

PAOLO ANTONIO PIRAZZOLI AND LUCIEN FRANÇOIS MONTAGGIONI. Late Holocene Sea-Level Changes in the Northwest Tuamotu Islands, French Polynesia 350

WILLIAM C. BURNETT AND KEE HYUN KIM. Comparison of Radiocarbon and Uranium-Series Dating Methods as Applied to Marine Apatite..... 369

DENIS GERAADS, JEAN-JACQUES HUBLIN, JEAN-JACQUES JAEGER, HAIYAN TONG, SEVKET SEN, AND PHILIPPE TOUBEAU. The Pleistocene Hominid Site of Ternifine, Algeria: New Results on the Environment, Age, and Human Industries .. 380

SHORT PAPERS

MICHEL DUBAR AND FRANÇOIS SEMAH. Paleomagnetic Data Bearing on the Age of High Terrace Deposits (Durance Sequence) in Alpine Valleys of Southeastern France 387

KENNETH L. COLE. The Lower Colorado River Valley: A Pleistocene Desert 392

BOOK REVIEWS

W. GEOFFREY SPAULDING. *Mastodon-Bearing Springs and Late Quaternary Geochronology of the Lower Pomme de Terre Valley, Missouri.* By C. Vance Haynes, Jr. 401

DAVID B. MADSEN. *The Archaeology of Monitor Valley. 2. Gatecliff Shelter.* Edited by David Hurst Thomas 402

QUATERNARY RESEARCH

An Interdisciplinary Journal

EDITORIAL POLICY

Quaternary Research is devoted to *interdisciplinary* articles dealing with the Quaternary Period. Editorial policy requires that articles must be of broad interest, of basic significance to more than one discipline, and constitute a significant contribution to knowledge. Previously unpublished research results, comprehensive reviews of syntheses of a field of knowledge, and occasional English translations of outstanding articles in other languages will all be considered.

Four categories of manuscripts will be considered for publication. *Articles* may not exceed 5000 words, or approximately 20 double-spaced typewritten pages, including tables and references. Exceptions to this rule are rarely made. *Short Papers* should not exceed 1500 words and should include no more than two figures; such contributions will normally be published more rapidly than full-length articles. *Letters to the Editor* will also be considered. If dealing with a paper previously published in *Quaternary Research* the author(s) of that paper will be given the opportunity of drafting a reply. Normally both the Letter to the Editor and the Reply will be published in the same issue. *Book Reviews* will be published only if solicited by the Book Review Editor and only after critical review by the Editors.

Manuscripts submitted to *Quaternary Research* that do not meet the length requirements of the journal will be returned to the author(s) for appropriate revision.

All manuscripts will by reviewed be at least two referees. Articles and Short Papers are evaluated as to whether they are interdisciplinary in content and of broad interdisciplinary interest, scientifically sound, and present evidence that is sufficient to support the conclusions. They are also evaluated for organization, clarity, and conciseness. The Editors' decision is sent to the author(s) together with the referees' comments and evaluations as soon as the file is complete.

Three copies of the manuscript, including legible copies of all figures, should be submitted to:

Quaternary Research Editorial Office
Quaternary Research Center (AK-60)
University of Washington
Seattle, Washington 98195

Manuscripts are accepted for review with the understanding that the same work or closely similar work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Quaternary Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the University of Washington. The University will not refuse any reasonable request by the author(s) for permission to reproduce any contributions to the journal.

INSTRUCTIONS TO AUTHORS

General instructions. Manuscripts should be written in clear and concise English and should conform to the general style of the journal and the specific instructions listed below. Manuscripts that are not adequately prepared will be returned to the authors, since it is not feasible for the Editors to revise or rewrite manuscripts. Contributors, particularly those unfamiliar with English usage, are encouraged to seek the help of colleagues in the preparation and review of manuscripts prior to submission. This practice reduces the time required for review and avoids delays in publication.

Form and style. Manuscripts should be concise, but detailed enough to permit critical appraisal. They should be typewritten and double-spaced *throughout* (including references, tables, figure legends, and footnotes) on one side of approximately 22 × 28 cm (8.5 × 11 in.) paper with 2.5-cm (1-in.) margins. If composed on a word processor, a letter-quality dot-matrix or daisy-wheel printer should be used. Tables and figure legends should be typed separately and placed at the end of the manuscript. All pages, beginning with the title page and including tables and figure legends, should be numbered consecutively and fastened securely. The title page should include the article title, author(s) (given names, rather than initials are preferred), affiliation(s) and address(es),

and suggestions for index entries. Addresses should include zip codes or postal districts when applicable. All correspondence regarding the manuscript will be made with the person submitting the manuscript. Authors should include in their letter of submittal the telephone number(s) where they can most easily be reached.

Title. The title should be concise, informative, and suitable for indexing. When appropriate, the geographic area of the research should appear as part of the title. Titles using colons or semicolons should be avoided.

Headings. In composing Articles, the manuscript should be divided by appropriate headings. If possible, no more than three orders of headings should be used. Headings are not required in the case of Short Papers or Book Reviews.

Abstract. Articles should include an abstract of no more than 200 words, typed on a separate page following the title page; in the case of Short Papers, the abstract should not exceed 100 words. The abstract should be a concise and *informative* summary that can be copied verbatim by bibliographers. Phrases such as ". . . are described" or ". . . are discussed" should be avoided (see Landes, K. K., 1951, A scrutiny of the abstract. *American Association of Petroleum Geologists Bulletin* **35**, 1660). Translations of the abstract in one or more other languages may be included at the discretion of the Editor.

Units. Metric units should be used throughout, with English equivalents in parentheses if originally given in English units. When used in conjunction with numerals, units should be abbreviated and unpunctuated (e.g., cm, g, %). Use the "American Chemical Society Handbook" as a guide.

Numbers. Numbers less than 10,000 should be expressed without a comma (e.g., 5456) but those of greater value should have a comma or commas separating each triad of digits (e.g., 14,460; 1,250,000). Decimal values less than 1 should be preceded by a 0 (e.g., 0.6; 0.005).

Dates. Historical dates should be expressed as years B.C. or A.D. (e.g., 1850 A.D.; 2030 B.C.). Dates less than 1 million years old should be written out (e.g., 150,000 ± 10,000 yr); the abbreviations "ka," "kyr," or "kyrs" should be avoided. Dates of a million years or more may be expressed in myr (not myrs) (e.g., 2.43 ± 0.2 myr).

Radiocarbon dates should be expressed as ^{14}C yr B.P. (before present) and should include the standard error as well as the laboratory number (e.g., 14,730 ± 150 yr B.P. (Y-661)). All radiocarbon dates should be rounded to the nearest 10 years. If the dates have been corrected for atmospheric variations in radiocarbon, the calibrated dates should preferably be reported as calendar years (e.g., 500 BC.*; the asterisk denotes that the date is calibrated) and the calibration table or graph should be specified.

K/Ar dates should also include the standard error. If laboratory numbers have been assigned, they should be given in parentheses following the date (e.g., 2.43 ± 0.10 myr (QL_K-10)).

Chemical notation. International notation should be employed in all cases (e.g., ^{18}O, ^{14}C, ^{40}K).

Temperature notation. Temperatures should be expressed in degrees Celsius (°C), with Fahrenheit equivalents in parentheses if originally reported in such units (e.g., 6°C; 20°C (68°F)).

Scientific names. Generic and specific names should be italicized. They may be underlined in the manuscript if italicized lettering is unavailable.

Stratigraphic nomenclature. Stratigraphic nomenclature should follow standard practice and procedures as detailed in the 1983 North American Stratigraphic Code (*American Association of Petroleum Geologists Bulletin* **67**, 841–875) and the 1976 International Stratigraphic Guide (International Subcommission on Stratigraphic Classification (H. D. Hedberg, Ed.). Wiley, New York). Authors dealing with stratigraphic nomenclature of archaeological sites are referred to the Guide to Archaeostratigraphic Classification and Terminology (Gasche, H., and Tunca, O. (1983). *Journal of Field Archaeology* **10**, 325–335).

Citations. All illustrations and tables should be cited somewhere in the body of the paper and in sequence (e.g., ". . . as illustrated in Figure 5"; ". . . in that region (Fig. 5)"; ". . . in Alaska and California (Figs. 4 and 5)"; "The values in Table 6 are taken from . . ."; ". . . the data obtained in this study (Table 6).").

Footnotes. Footnotes in the *text* should be kept to a minimum, be identified by superscripts consisting of Arabic numerals, and should be typed on a separate sheet; footnotes in the *tables* should be identified with superscripts consisting of the lowercase letters a, b, c, etc., and placed at the bottom of the table.

Tables. Tables should be numbered using Arabic numerals and cited consecutively in the text. Each table should have a title and be typed double-spaced on a separate sheet. Tables should not be prepared with vertical lines or boxes (see examples in recent issues). Units should be clearly indicated for each of the column entries in a table.

Illustrations. All illustrations, whether line drawings or photographs, are considered figures, should be denoted by Arabic numerals, and should be cited consecutively in the text. Figure legends should be typed on a separate sheet. Units should be clearly indicated in the figures themselves and should follow the same style as used in the text. All maps should have longitude and latitude coordinates indicated, as well as a bar scale in metric units. *Important:* All figures are to be submitted in such form as to permit photographic reproduction without retouching or redrafting, including the lettering. Lettering is reproduced as part of the artwork and is not

set in type. Line drawings should be carefully drafted with black India ink on white drawing paper, clear drafting film, or blue drafting cloth, and should be no larger than 22 × 28 cm (8.5 × 11 in.) overall. The lettering should be large enough to allow a 50% reduction. High-quality glossy prints, not exceeding 22 × 28 cm, are acceptable in place of original drawings and are required for photographs. Color plates or foldout illustrations can be accepted only if the authors defray the cost. Cost estimates can be furnished by Academic Press on request.

References. References should be cited in the text by the author's surname and date, such as "Smith (1980) reported that . . .", "as previously reported (Jones *et al.*, 1981)." Articles authored by more than two persons should be cited in the text using the first author's surname followed by *et al.* (not "and others"); however, the names and initials of all authors should appear in the reference section. Suffixes (a, b, c, etc.) should be used to distinguish two or more works by the same author(s) in the same year (e.g., Moore, 1982a, 1982b). A direct quotation should always be page-referenced; a paraphrased statement should be page-referenced if the article exceeds 10 pages. Personal communications should be cited in the text, but not in the reference section, and should include the surname and initials of the source as well as the year of communication, e.g., (Smith, L. G., personal communication, 1982). The reference section should be arranged alphabetically according to the author's surname; order of items: author(s), date of publication, title of article, journal or book title (written out in full rather than abbreviated), volume number, inclusive pages, and (for books only) publisher and city. The following format should be employed:

Flint, R. F. (1974). Three theories in time. *Quaternary Research* **4**, 1–8.

Washburn, A. L. (1980). "Geocryology." Wiley, New York.

Imbrie, J., and Webb, T., III (1980). Transfer functions: Calibrating micropaleontological data in climatic terms. *In* "Climatic Variations and Variability: Facts and Theories" (A. Berger, Ed.), pp. 125–134. Reidel, Dordrecht.

Heusser, C. J. (in press). Holocene vegetation history of the Prince William Sound region, south-central Alaska. *Quaternary Research*.

Dunwiddie, P. W. (1983). "Holocene forest dynamics on Mount Rainier, Washington." Unpublished Ph.D. dissertation, University of Washington.

Reference should not be made to unpublished manuscripts or manuscripts in preparation. Instead, such information can be referred to as, e.g., (Jones, J. S., unpublished data).

Proofs. It is the responsibility of the authors to read the proofs carefully and to note all errors. Proper placement and orientation of illustrations should also be checked. Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. Fifty reprints of each article or short paper will be supplied free of charge. Additional reprints may be ordered on the form accompanying the proofs.
